## IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with <u>underlining</u> and deleted text with <u>strikethrough</u>. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please AMEND the claims as follows:

- 1. (Currently Amended) A dishwasher, comprising:
- a cabinet having a cavity;
- a frame to be moved forward and backward in the cavity;
- a rack holding dishes; and
- a plurality of rotary members, each rotary member rotatably mounted at a lower end thereof to the frame and at an upper end thereof to the rack so the rack is moved up and down with respect to the frame;

a stopper mounted at a predetermined position of the frame, wherein the rotary member is stopped by the stopper so the rotary member is not forwardly rotated beyond a predetermined distance; and

an extension piece upwardly extending from both sides of the frame, the stopper being included on the extension piece to be inwardly projected from the extension piece.

- 2. (Cancelled)
- 3. (Currently Amended) The dishwasher according to claim 21, further comprising: an upper hinge shaft; and

a lower hinge shaft, wherein the rotary members are mounted to a side of the rack by the upper hinge shaft and to a side of the frame by the lower hinge shaft, respectively, so as to be rotated forward and backward with respect to the frame.

- 4. (Cancelled)
- 5. (Currently Amended) The dishwasher according to claim [[4]]3, wherein the stopper is provided on the extension piece so a forward rotation of the rotary member is stopped at a

position where the rotary member is rotated forward substantially beyond a right angle from a horizontal position thereof.

6. (Currently Amended) The dishwasher according to claim [[4]]5, wherein the stopper is provided on the extension piece so a forward rotation of the rotary member is stopped at a position where the rotary member is rotated forward at an angle of 110° from a horizontal position thereof.

## 7. (Cancelled)

- 8. (Original) The dishwasher according to claim 1, wherein a handle is provided at an upper portion of the rack so that both ends of the handle are rotatably mounted to both sides of the rack, thus allowing the rack to be easily moved upward.
  - 9. (Currently Amended) A dishwasher, comprising:
  - a cabinet defining an interior washing cavity;
  - a frame to move in and out of the washing cavity;
  - a rotary member that rotatably mounts to the frame at a first end thereof; and
  - a rack that rotatably mounts to the second end of the rotary member;
- a first extension piece integrally connecting to and extending from a middle portion of the frame; and
  - a stopper on an inner surface of and projecting from the first extension piece.
- 10. (Original) The dishwasher according to claim 9, wherein the frame is substantially rectangular.
  - 11. (Original) The dishwasher according to claim 9, wherein the frame comprises: a sliding rail; and
  - a rail fixed to the cavity, wherein the sliding rail moves along the rail fixed to the cavity.
- 12. (Original) The dishwasher according to claim 9, further comprising rollers on front and rear ends of the frame.
  - 13. (Currently Amended) The dishwasher according to claim 9, further comprising ana

second extension piece integrally connecting to and extending from a front portion of the frame.

- 14. (Currently Amended) The dishwasher according to claim 13, further comprising a stopper on an inner surface of and projecting from the <u>second</u> extension piece.
  - 15. (Cancelled)
  - 16. (Cancelled)
- 17. (Original) The dishwasher according to claim 9, further comprising a lower hinge shaft connecting to the frame and the first end of the rotary member.
  - 18. (Cancelled)
- 19. (Original) The dishwasher according to claim 9, further comprising an upper hinge shaft connecting to the rack and the second end of the rotary member.
- 20. (Original) The dishwasher according to claim 9, wherein when the rotary member rotates backward, the rack comes in to close contact with the frame.
- 21. (Original) The dishwasher according to claim 9, wherein when the rotary member rotates forward, the rack moves apart from the frame.
- 22. (Original) The dishwasher according to claim 9, further comprising a handle at an upper portion of the rack.
